

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

The Committee to which was referred Dr. Wetherill's paper on a Chemical Examination of certain Minerals from the neighbourhood of Reading, Pennsylvania, reported, recommending its publication in the Transactions of the Society; which was ordered, and the Committee discharged.

Dr. Kane made some remarks on the Ice Drift of Baffin's Bay, showing that the Gulf stream enters the Arctic Ocean on the European side, and affects the climate of Nova Zembla; while another current, running along the coast of Greenland, enters Baffin's Bay, running north, and is supposed to terminate short of the Arctic circle.

Pending nominations for membership were read.
